Harvard Medical School

Non-Pharmaceutical, All-Natural Resveratrol for Cents-a-Day!

According to Dr. David Sinclair, the Associate Professor of Pathology at Harvard Medical School, as quoted in the Harvard Gazette, ***“We have something [resveratrol] that extends the life of every species it’s given to. We’re 50 years ahead of where I thought we would be ten years ago.”***

Indeed, resveratrol, a naturally occurring antioxidant found in red grape skins and wines made from red grapes is making leading anti-aging specialists rethink their view on growing old. ***“Tests done on clinical subjects in vivo (inside the body) have shown a marked decrease in aging – up to 15% in some cases – while the resveratrol also warded off diabetes and the ill effects of overeating. If this same effect is seen in those who take the supplement daily this could mean an extra 11 years of healthy life.”*** – Dr. B. Frazier

The prospect of having such a powerful anti-aging compound as easily obtainable as harvesting grapes has not escaped the attention of major pharmaceutical companies as a cash-cow. As reported on 60 Minutes, Glaxo Smith-Kline, a giant in the drug industry, is putting up nearly \$750 million dollars to research resveratrol. ***“While the pharmacological research being done on resveratrol will help us discover many of its benefits, unfortunately, it will also be used to develop drugs with a very limited scope of use. As I’ve seen happen with every other natural substance that’s been made into a drug, there will be side effects that aren’t present in the natural form – not to mention the fact that it will undoubtedly cost a small fortune and be available only through pharmacies.”*** – Dr. Teresa Roberson, Ph.D., N.D., C.N.C.

Resveratrol is thought to partially explain the ‘French Paradox’ (the phenomenon that allows the French to eat a diet that is high in fat and carbohydrates and yet live longer (as much as 40%) and have less cardiovascular disease than their American counterparts. By protecting against bad cholesterol, high blood pressure may be reduced and because it preserves the building blocks of the skin (collagen and elastin), resveratrol may actually help you look and feel younger for longer!

Fortunately, those who wish to partake of the benefits of resveratrol without waiting for the drug form of the all-natural substance can do so now by ordering **LifeSpan Resveratrol** Today!

As Seen on 60 Minutes

Four Capsules of First Choice LifeSpan = 1112 Glasses of Red Wine EVERY DAY!

Actual
Size

“While resveratrol is undoubtedly good for your body, getting a therapeutic dose from food sources isn’t practical. For instance, while red wine and grapes contain one of the highest concentrations of resveratrol available from a non-supplemental source, it would take nearly 25 GALLONS of wine or 160 cups of grapes to get 200 mgs. of the antioxidant. A better alternative is to simply take an encapsulated supplement, such as First Choice LifeSpan resveratrol (a supplement that is second to none in purity), that contains a minimum of 50 mgs. of resveratrol.” – Dr. Roberson

Resveratrol and the potential benefits it holds for health, longevity and physical performance has been reported on by a number of primetime news channels including:

In an article in the AIM Digest titled **Resveratrol Study Demonstrates Significant Health Benefits** as well as studies presented in several peer-reviewed publications, we read that resveratrol is known for its therapeutic potential in :

- **Cancer Chemoprevention**
- **Vascular Protection**
- **Age-Related Disorders**
- **Neurodegenerative Diseases**
- **Inflammation**
- **Diabetes**
- **Brain Sparing Effects**
- **Cardiovascular Disease**

Dr. Lindsay Brown, associate professor in the School of Biomedical Sciences at the University of Queensland, regarding resveratrol, has stated:

“The breadth of benefits is remarkable – cancer prevention, protection of the heart and brain from damage, reducing age-related diseases such as inflammation, reversing diabetes and obesity, and many more. It has long been a question as to how such a simple compound could have these effects but now the puzzle is becoming clearer with the discovery of the pathways, especially the sirtuins, a family of enzymes that regulate the production of cellular components by the nucleus.” And “...resveratrol turns on the cell's own survival pathways, preventing damage to individual cells... including removing very reactive oxidants in the body and improving blood supply to cells. Low-dose resveratrol produces cellular protection and reduces damage, while high-dose resveratrol prevents cancers.”

Regardless of what supplement(s) you choose to take, it's very important to eat a healthy diet and to exercise regularly. Exercising at least 3 times a week for 30 minutes and eating a diet that is rich in fiber and fresh fruits and veggies will help ensure a lifetime of health!
